

The neutral global infrastructure that turns carbon data into a business asset

PACT makes it possible for companies to calculate, share, and act on product carbon data, consistently and at scale. Think of it as the SWIFT for carbon data: it doesn't touch the data, it enables the flow.

*What SWIFT did for money,
PACT is doing for carbon.*

PCFs calculated

Common Methodology

Harmonized, globally applicable PCF calculation rules built on GHG Protocol & ISO 14067, adding the consistency needed for real comparability across sectors, borders and systems.

Open Data Exchange

One exchange standard so data flows between any software, system or jurisdiction, without manual conversion. No data flows through PACT, companies keep full ownership.

Global Community

150+ stakeholders aligning on standards, driving adoption, and building the trust data-driven decisions require.

Product Level Data Use Case Forum

PACT is leading on a new workstream to enable businesses to start from real use cases, lower the barrier to entry where incomplete data is good enough to act, and bring together methodology, implementation, and tech perspectives to mature use cases in practice.

Core outcome for members

Confidence on what level of product carbon data is “fit-for-purpose” for each use case, how to operationalize use-cases, and where increased data completeness or alignment is essential to enable data-driven decision making.

PCF Usability Model

PACT is developing a fit-for-purpose matrix with a 'Levelled' approach to PCF data, moving from problem-solving and validation in Q1–Q3 toward full methodology, exchange, and implementation enablement in Q4 and beyond.

Supporting Regulatory Demand (CBAM)

PACT is building a methodological and technical bridge between PCF and CBAM reporting data, progressing from design and working group validation through piloting and implementation by Q4.

New Use Case Development

Members are invited to propose use cases that require new methodological guidance or go beyond current PACT support, with dedicated funding and sponsorship required to launch.
